

$\frac{3}{4}$ and $\frac{6}{8}$ Time Signatures

Both $\frac{3}{4}$ and $\frac{6}{8}$ can contain six eighth notes in a measure.

To tell the difference between the two time signatures, look for how the eighth notes are divided.

In $\frac{3}{4}$, eighth notes are usually in groups of two.

In $\frac{6}{8}$, eighth notes are usually in groups of three.

Write the correct time signature at the beginning of each example.
